

METALLUK was originally founded in 1924 in the 1000 year old imperial city of Bamberg. The present owner Mr. Karl Anton Bauscher purchased the company in 1964 and the business still operates under family control.

Our factory which has expanded over the years now covers 15.000 m² and is based in the east of the city on Berliner Ring, which is the city bypass directly accessible from the motorway.

We value the independences of full manufacturing control and do have the ability to meet our customers various design and development requirements. We are therefore very proud of our full integrated in house tool making and maintenance department which not only boasts modern and comprehensive facilities, but which we also continually update to ensure technological excellence and commercial viability.

The prime aims of **METALLUK** are to produce innovative products of high quality, reliably, and competitively in accordance with the market demands and the prevailing International Electro and technical regulations. We are certified to **ISO 9001:2008**.
